- See our **different APIs and webhooks** to manage authorization, orders, stores and menu configuratior
- Download the **yaml file** to explore endpoints, methods and samples of API requests and responses.
- Have all the information to start **testing** your application.
- Understand how to take advantage of all tools in our **Application Management**.
- Understand the **operational process of 99Food** that can assist you in the daily operations manageme
- Learn with our **FAQ**.

Benefits of the Integration

With an integration with **99Food**, restaurants and POS will be able to incorporate the resources of their businesses wit designed to allow you to integrate with our application as quickly and easily as possible.

As our partner, you'll be able to see all the available endpoints that give you **control over how your application can int** thus giving you control over your own development accounts, stores, menus, items and managing the orders. It's impo modules can be integrated independently, but we always recommend having all modules integrated to get the full ber

Besides this, the integration is the only way to use the multi-level menu feature. You can check the limitations of our d image below:

> **IMPORTANT:** This portal is always under continuous improvement and is subject to changes without any previous n contained in this website is shared to you in strict confidence, therefore, the restricted sections can't be shared with authorized to access it. If another partner wants to have access to them, please have them contact 99Food directly
